Risk Factors (Summary)

An investment in the Notes involves significant risks. Investors may lose some or all of their investment. The Notes are unsecured obligations of the Issuer and are subject to the credit risk of the Issuer. The Underlying employs a volatility-targeting mechanism which may materially reduce exposure to its underlying index in periods of elevated volatility, including in rising markets, and the Deduction Factor and Transaction Cost Rate reduce the Index Value on an ongoing basis; as an Excess Return index, the Underlying does not benefit from any cash or reinvestment return. Past performance, including back-tested performance, of the Underlying is not a reliable indicator of future performance. The secondary market, if any, may be illiquid; a bid price, where available, may be up to 3.00% below the theoretical value of the Notes. A 10% decline in the Underlying does not translate into a 10% decline in the value of the Notes; the relationship is non-linear. The memory feature does not guarantee that any deferred Coupon will ultimately be paid.

This document is an indicative term sheet and does not constitute an offer, solicitation or recommendation.
